

Research Forum 2019 Impacts of Super Typhoon Mangkhut

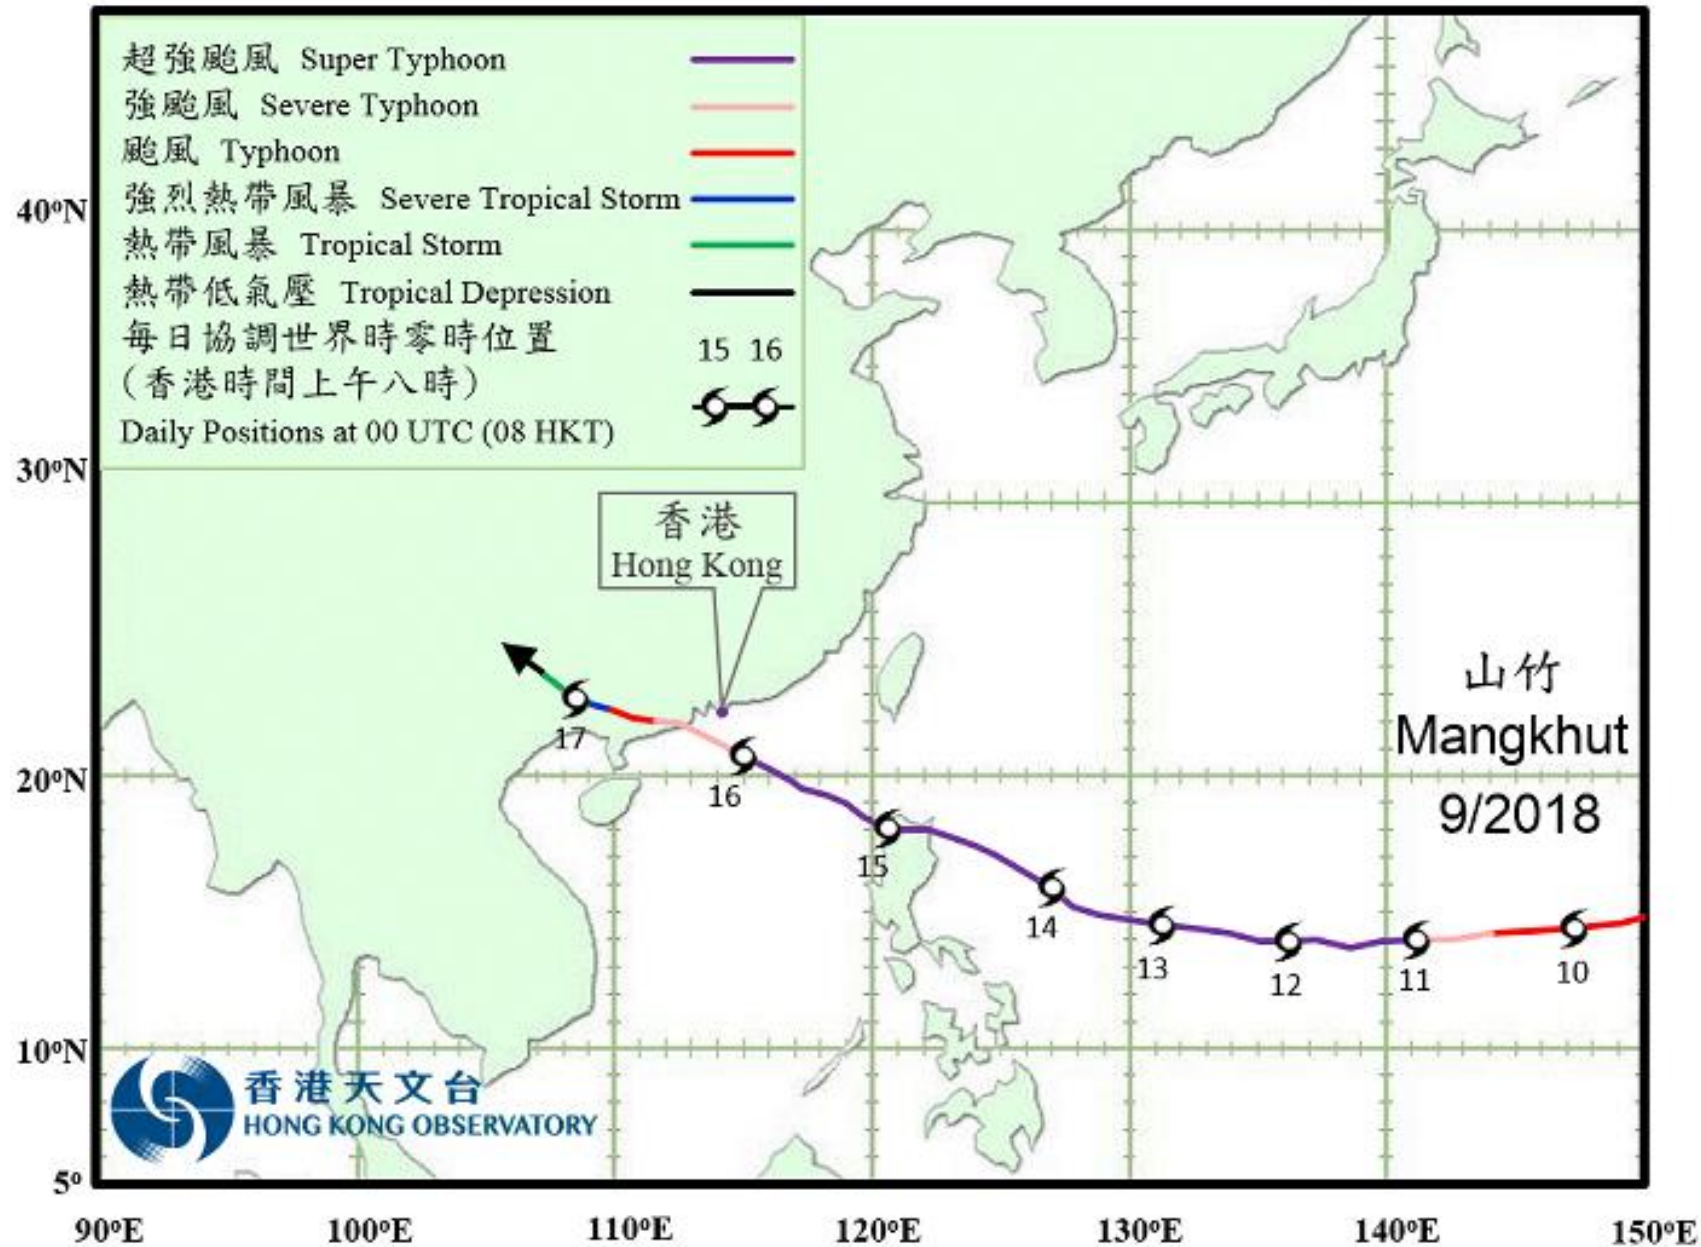

Sandy Song
Senior Scientific Officer

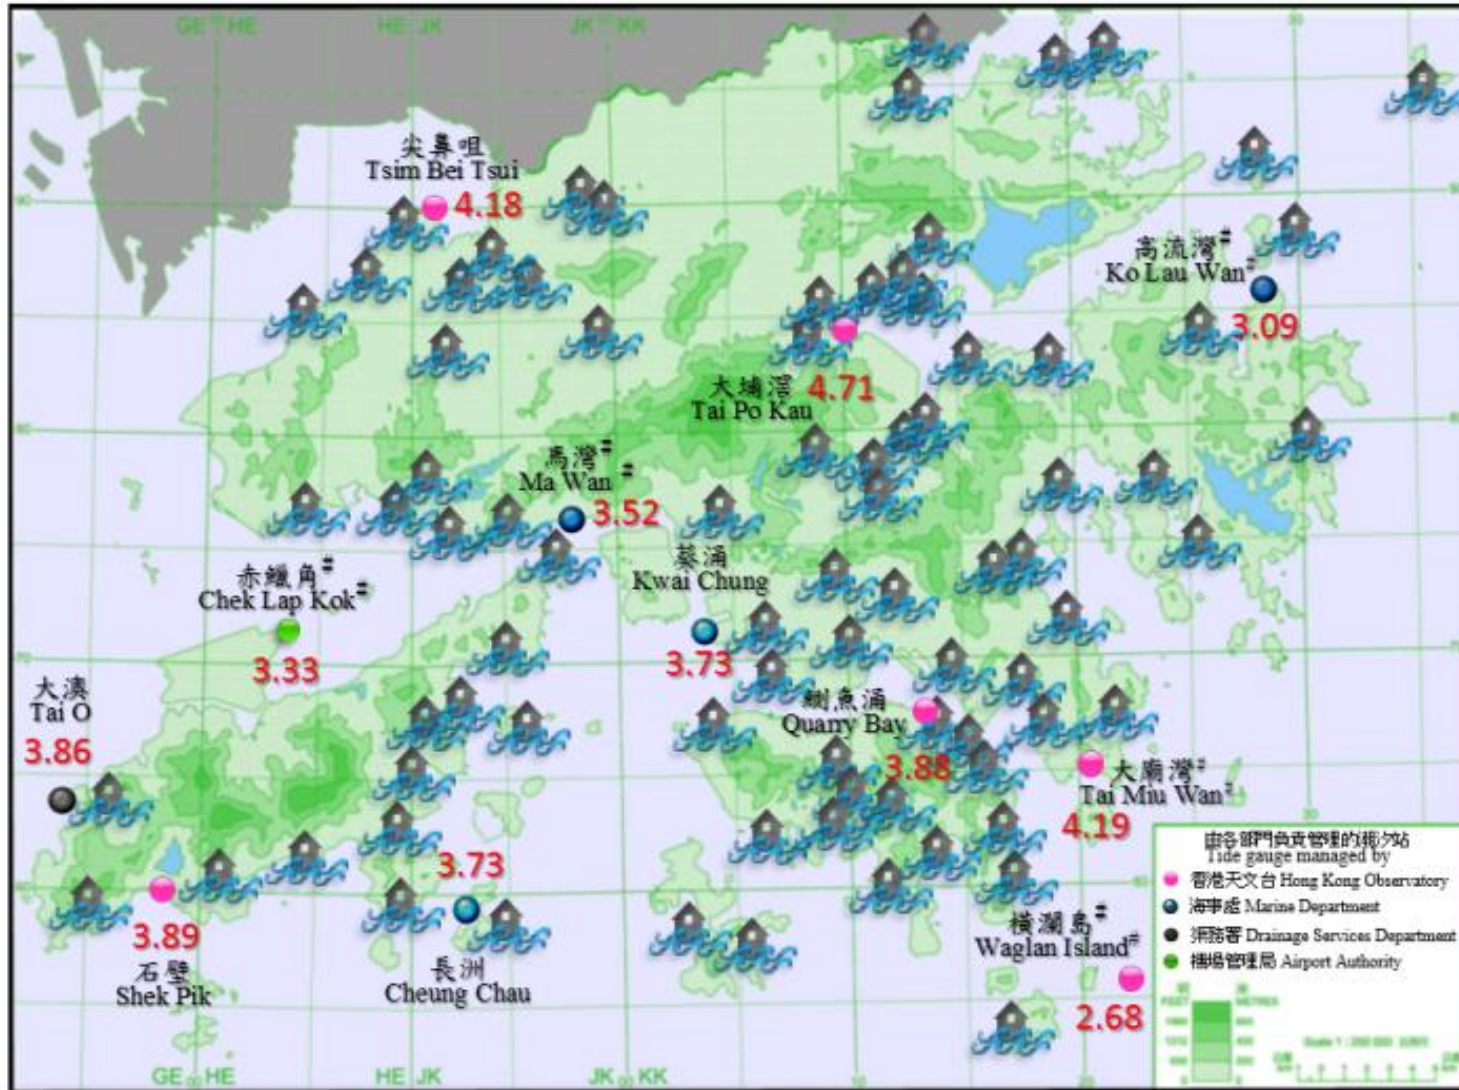

Mangkhut

Mangkhut

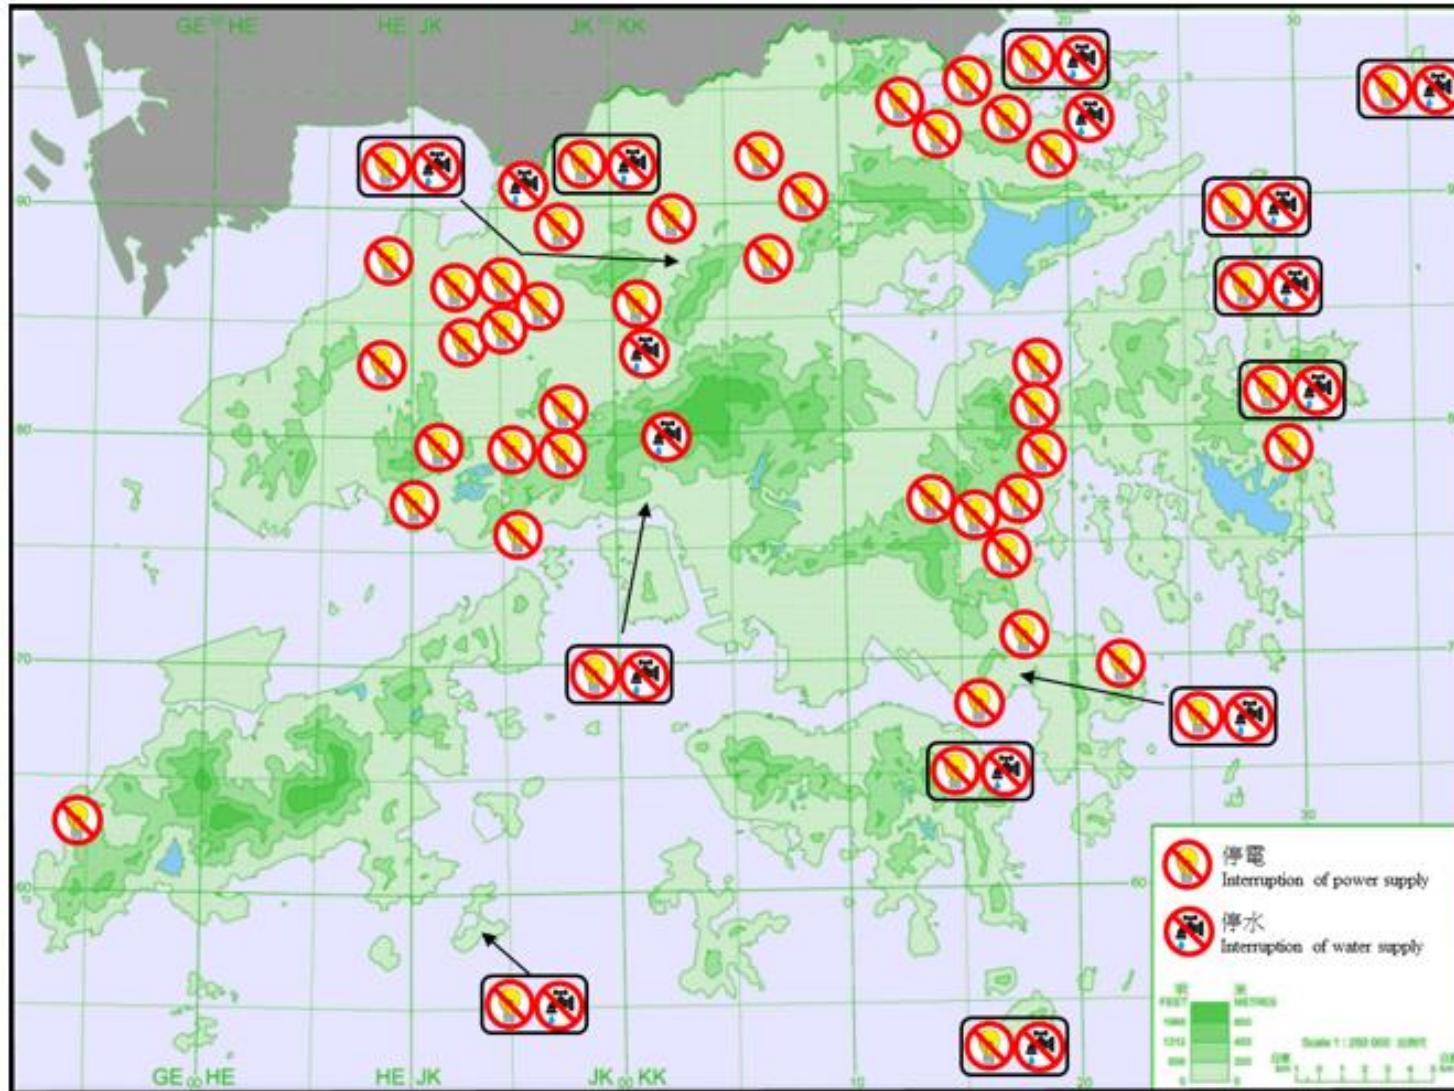

Mangkhut

Maximum sea level (metres above Chart Datum of Hong Kong) recorded at various tide gauges in Hong Kong and flood reports from government departments, news and social media on 16 September 2018 (Mangkhut). The flood reports are not exhaustive.

Mangkhut

Reports of interruption of power and water supply under the influence of Mangkhut based on information from government departments, news and social media. The incident reports are not exhaustive.

Impacts – Storm surge

Impacts – overtopping waves

Impacts - trees

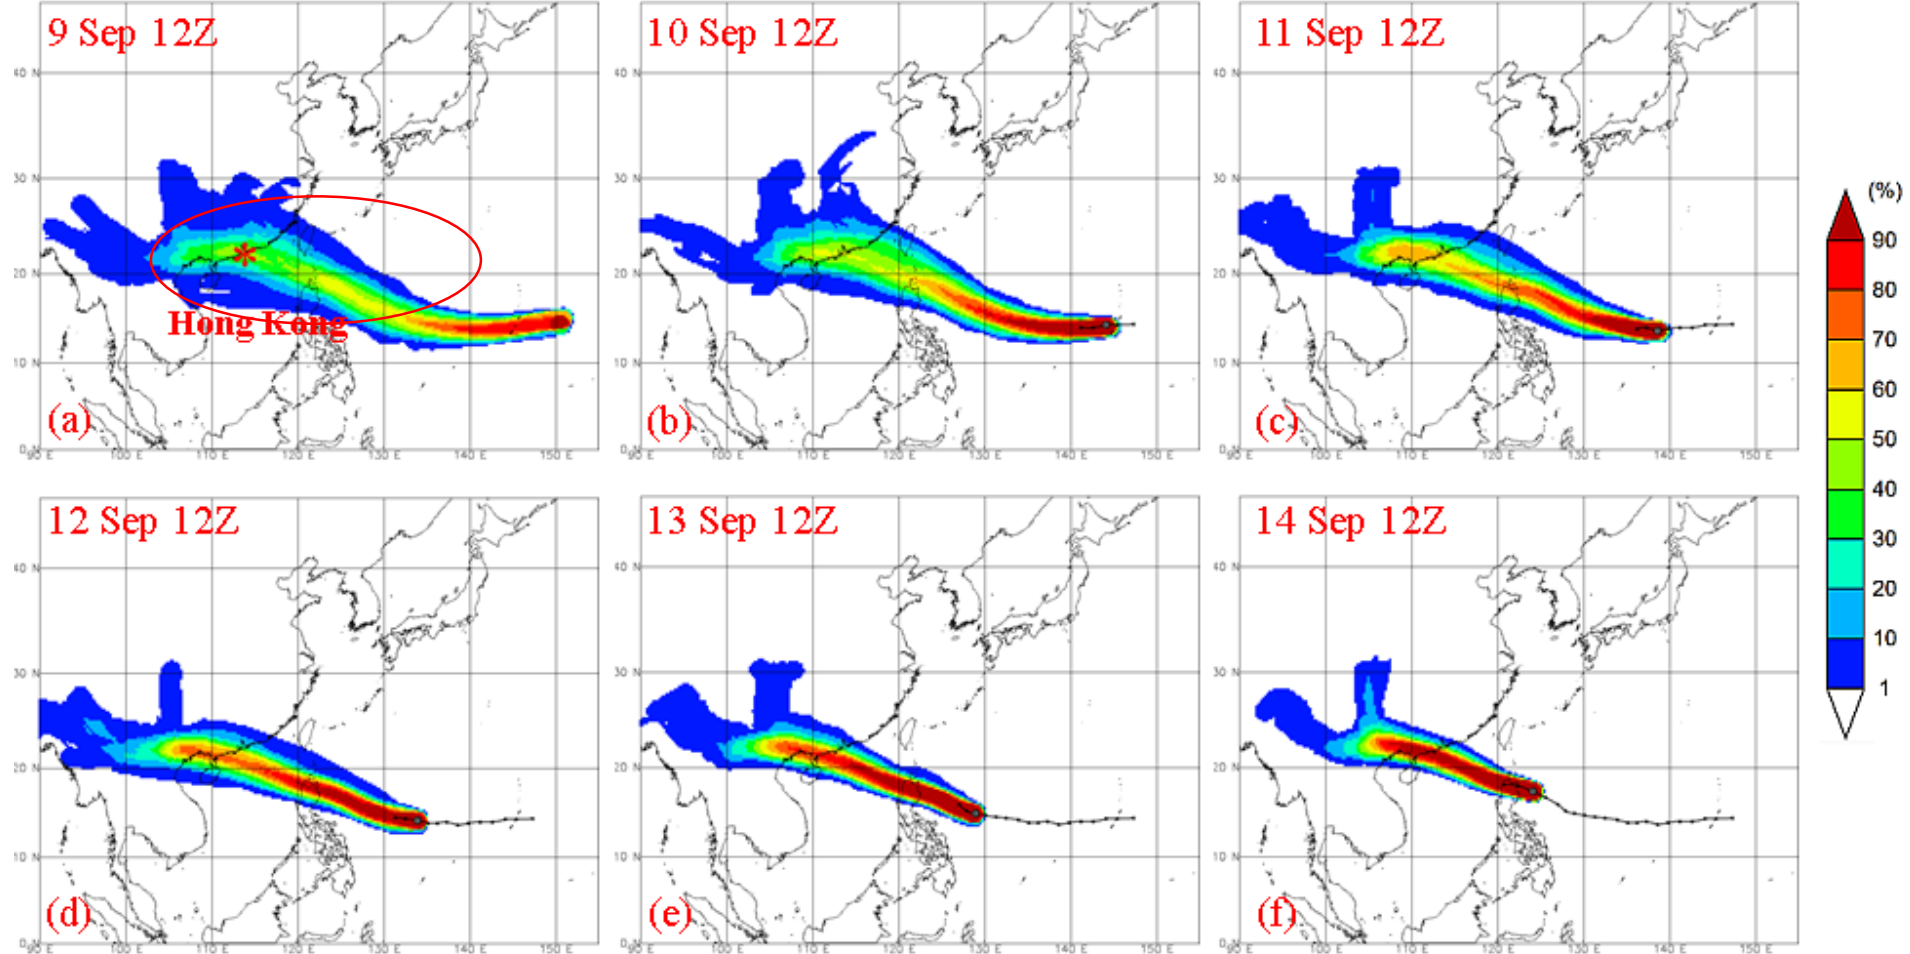

Impacts - buildings

Impacts - others

Challenges

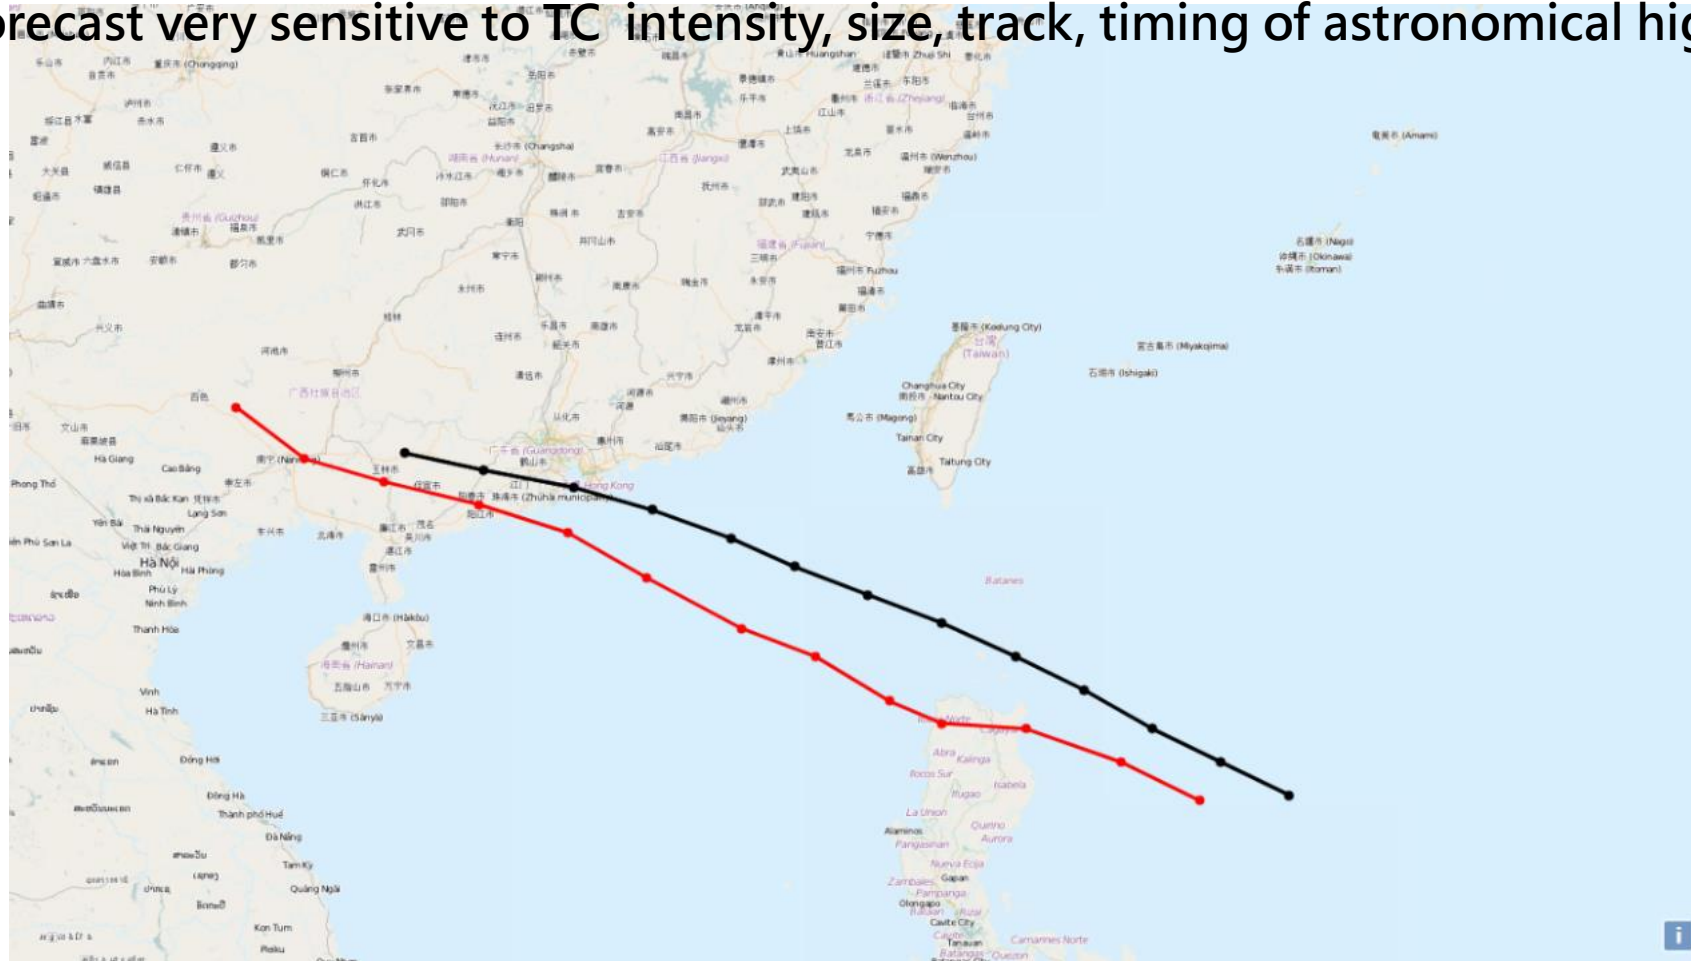

EPS strike probability maps of Mangkhut based on the ensembles of ECMWF, EGRR and NCEP from 12UTC runs on 9 September 2018 to 14 September 2018.

Challenges

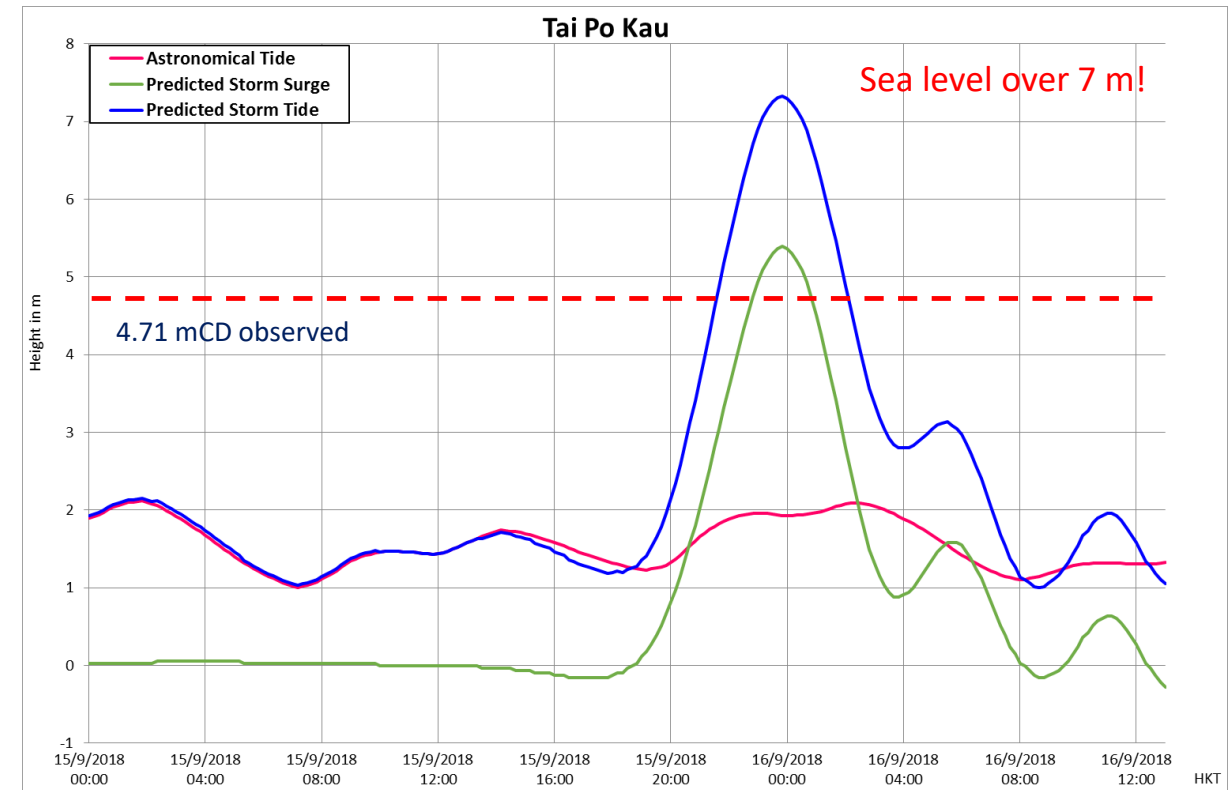

storm surge forecast very sensitive to TC intensity, size, track, timing of astronomical high tide

Forecast track of Mangkhut issued on 11 September 2018 (Black). Actual track of Mangkhut (Red).

Challenges

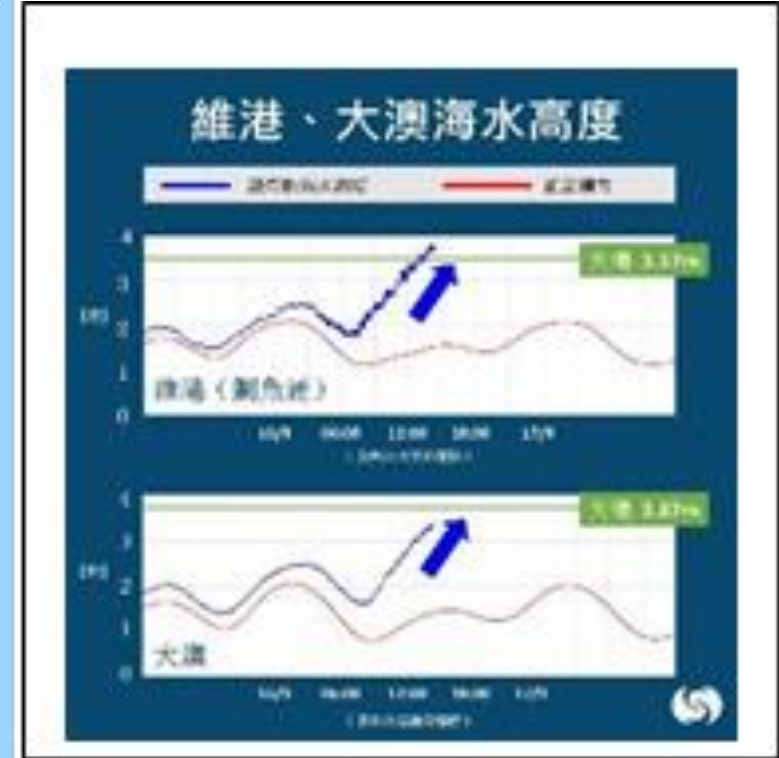

Time series of predicted storm surge and storm tide at (a) QUB and (b) TPK based on the official forecast track on 11 September 2018 for Mangkhut not crossing Luzon and peak storm surge of Quarry Bay occurring at the astronomical high tide on 16 September 2018.

Opportunities –disaster risk reduction

Opportunities – awareness on storm surge threat

actual and predicted increase in local water level induced by storm surge (right)

Opportunities – Crowdsourcing

- Crowd sourcing through
 - FB
 - MyObservatory app (upcoming)
- Interactive Map of Storm Damage by Mangkhut
- Cool Met Stuff series on Mangkhut

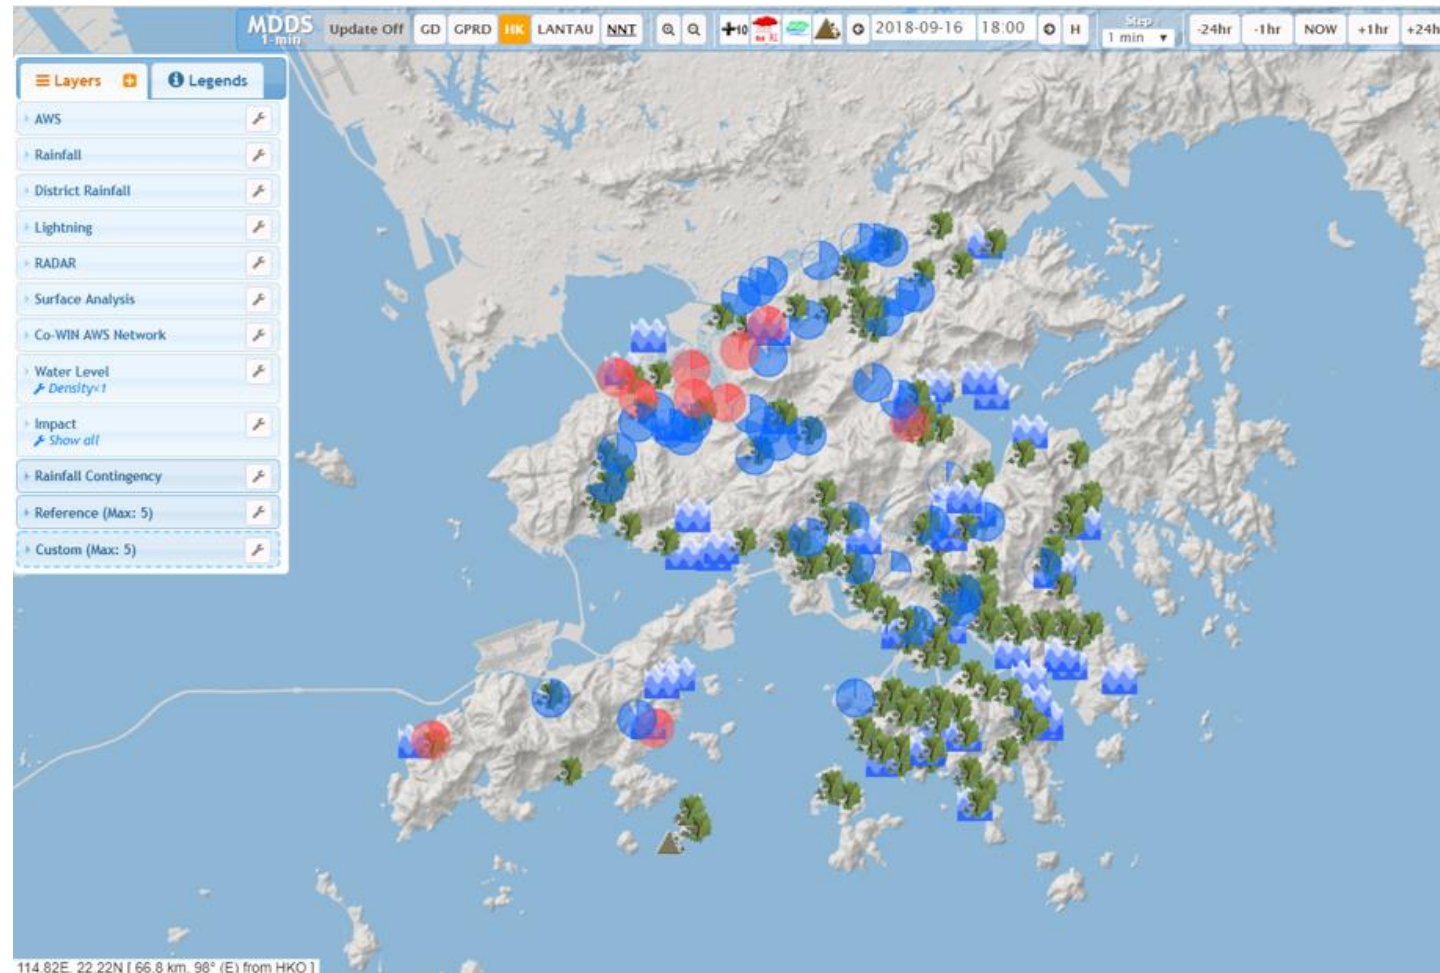

Opportunities - Public Education

Educational videos with topics on typhoon related hazards (storm surge, high winds and waves) had been posted on HKO FB before the passage of typhoons so as to remind the public on the potential threats from typhoon

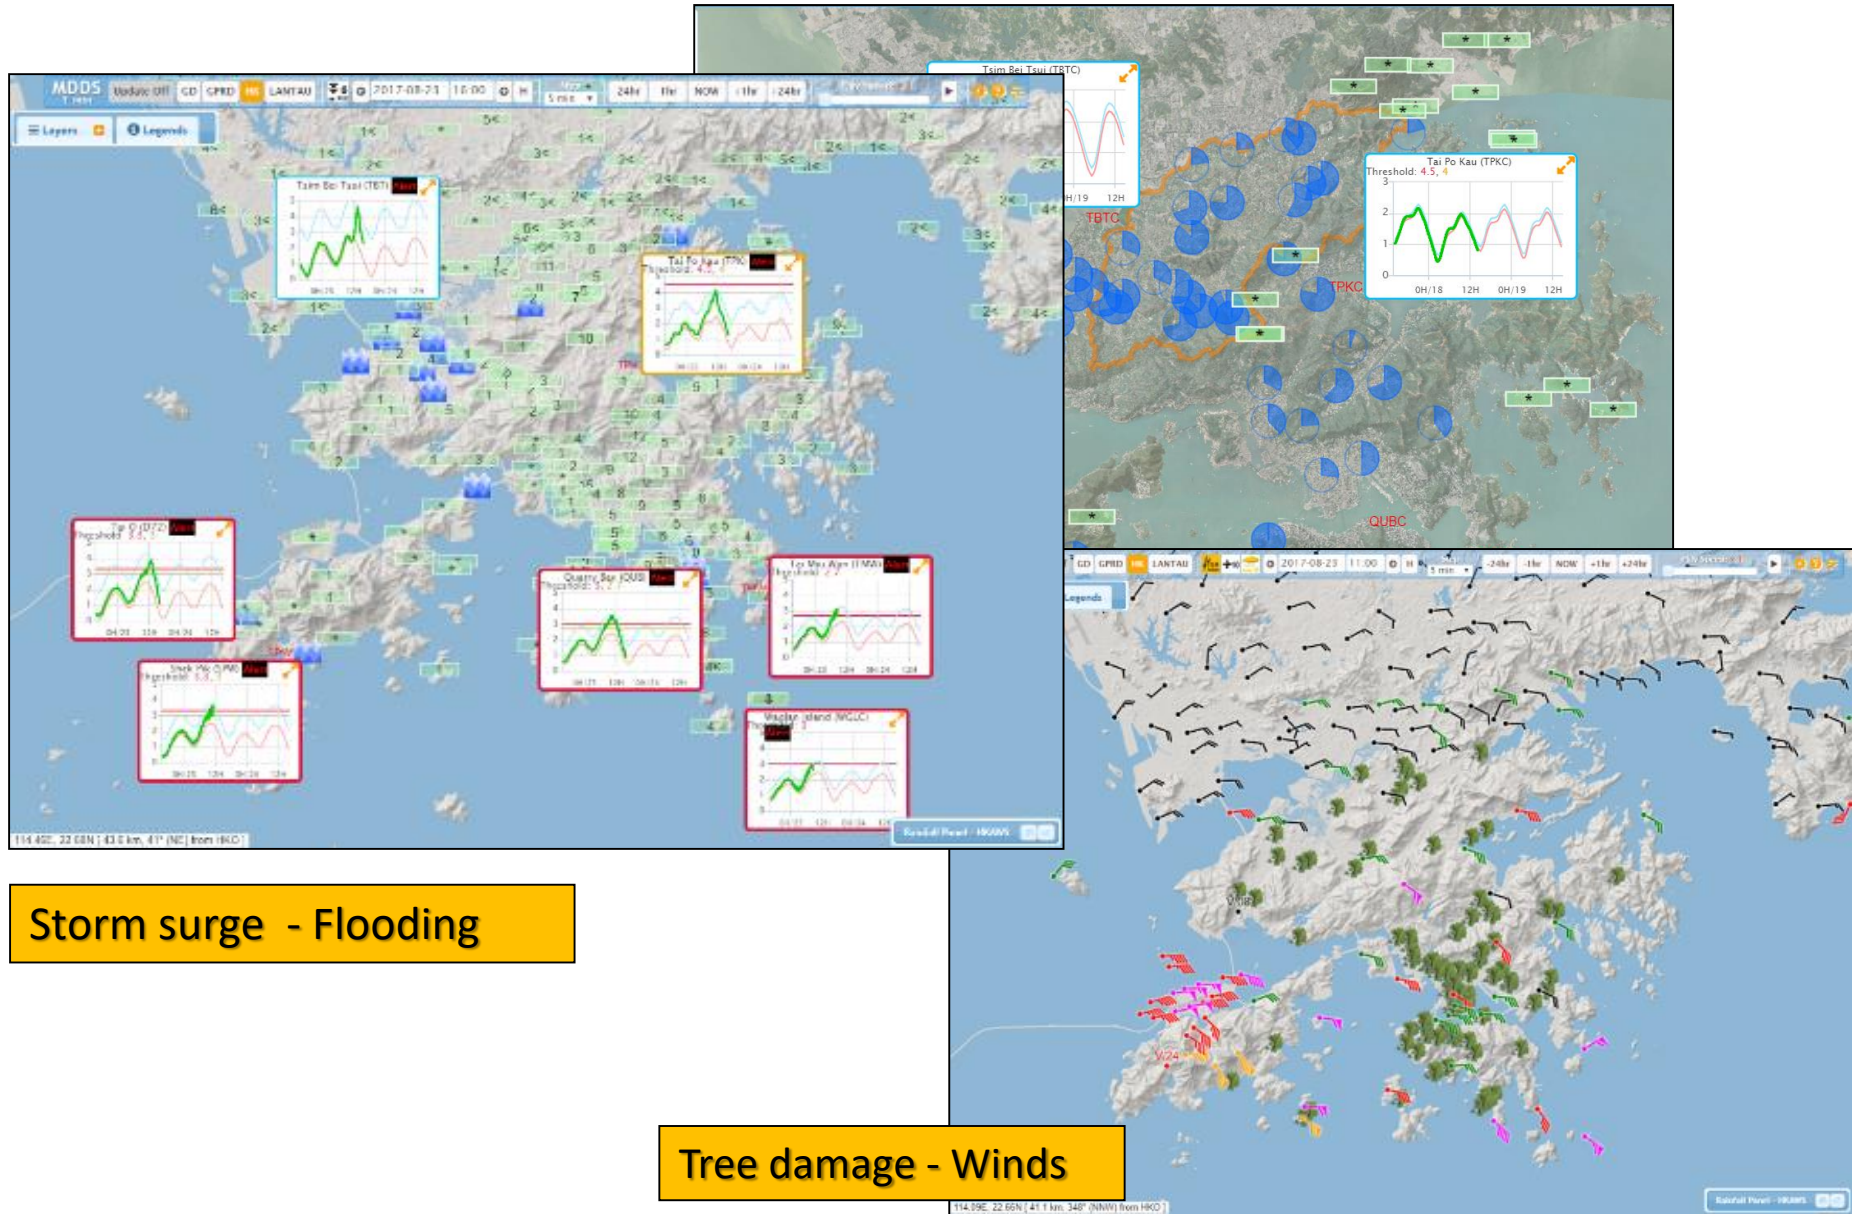

Opportunities – Impact analysis

Display of hydrological information (as pie charts: red/blue colour refers to water level above/below alert thresholds), fallen tree (🌳), landslide (🏔️) and flood (🌊) reports (not exhaustive) in Hong Kong during the passage of Mangkhut on 16 September 2018.

Impact Analysis

Rainfall – Flooding

Storm surge - Flooding

Tree damage - Winds
